

Olex2MI

Olex2MI is a Windows software to display the user data collected with Olex into MapInfo ; to sum up, it converts the Ruter file from Olex into a MIF/MID file

Before : integration of Olex marks (graphical symbols) into MapInfo 7.5

The customizable library is located in :

C:\Documents_and_Settings\User\Application\Data\MapInfo\MapInfo\Professional\Mapinfo750\CustSymb

- so put the 24 Olex specific icons into the previous folder.
- launch MapInfo, then activate the Symbol style item (Alt+F8) in the Options menu.
- in the Symbol style window, choose « Custom Symbols » for the Font item , then click on the « Reload » button to update
- checking clicking on the Symbol item to verify the presence of the Olex icons

Data input : Ruter (Unix text file)

Automatic output : 2 files

- Ruter.mif (geographical data)
- Ruter.mid (comments in text for the different objects) : use the « i » info button in the tools palette
